GLENWOOD NURSERIES

Quality Trees

GLENWOOD, FLORIDA

BUSINESS TERMS AND CONDITIONS

Shipping Season. November to July. Citrus trees can, however, be shipped any time of year, but should go by express during hot weather. Orders sent in during shipping season will be forwarded as soon as possible unless otherwise instructed. Orders booked in advance of season will be forwarded as soon as may be after opening of season, unless to be held for definite shipping date.

Shipment. Trees will be boxed or baled, as best meets requirements of order, and forwarded by freight or express, according to our judgment.

Prices shown in this catalog are net for trees and plants carefully packed and delivered f. o. b. cars at nursery, shipping point.

Terms. Cash with order during shipping season. If order is placed in advance of season, a payment of 25 percent of order to accompany it, balance before shipment, will generally be satisfactory.

Transportation at Purchaser's Risk and Expense. Our responsibility ceases upon delivery in good order to forwarding companies. Claims for loss or damage in transit should be made upon latter. We will, however, start a tracer for delayed shipments, if notified, and use every means at our command to secure prompt delivery, or recovery, in case of damage or loss. All freight and express charges at purchaser's expense.

We Guarantee all stock sent out to be well grown, well rooted, true to name, properly packed and shipped according to instructions. Our liability under this guarantee is limited in amount to the original price received.

Substitution. Unless instructed to the contrary, we substitute where varieties or sizes ordered are exhausted, as we find that our customers generally prefer that we use our judgment in such cases; but, in all cases varieties sent are properly labeled and invoices show the substitute as well as variety substituted for.

Complaints or Claims. We use every possible precaution to prevent errors, but when, by any possibility, they do creep in, we will deem it a favor if you will report at once. Claims should be made within ten days after receipt of goods.

Location, Glenwood, Fla.

Telegraph Station, Glenwood, Fla.

GLENWOOD NURSERIES

Glenwood, Florida

INTRODUCTION

In presenting this catalog to our Citrus growing friends and prospective customers we take pleasure in announcing that we are offering the best line Citrus stock we have grown in our thirty years' experience.

Our soil and climate conditions are ideal for growing first class stock, and our policy is to grow only the best *tested* sorts, thus limiting our production as to quantities that we may personally oversee their propagation, training, and shipping that Glenwood trees may deserve the distinction they are accorded as Trees of Quality and Results.

CITRUS FRUITS AND THEIR CULTURE

By H. Harold Hume

This work is heartily indorsed by the leading growers of Citrus Fruits, which subject is thoroly covered in all its phases, from the preparation of the land and planting to marketing the fruit.

For the grower of Citrus Fruits this work is invaluable. It contains 597 pages, well illustrated with drawings and engravings.

Price \$2.50 postpaid, or we will include this book free with any order for trees amounting to Fifty Dollars when cash accompanies order. Every grower should have this, and we trust that all who can will take advantage of this offer.

ORANGES

The Orange has, for many years, been the most prominent of subtropical fruits, largely so by reason of its being one of the most profitable.

The wonderful ability of the trees to withstand adverse conditions and still annually produce fruit; the extreme length of time that fruit can remain on the trees after maturity, making it possible to ship when markets are in best shape; and the fact that if properly packed the fruit will stand long distance shipment, makes the Orange one of the safest and most profitable fruits to grow.

In planting an orange grove it is poor business to try to get the cheapest trees possible. Cheap trees seldom prove healthy and fruitful. Orange nursery trees to prove vigorous and prolific should have large, well formed root systems and strong, clean, healthy tops one or two years old. Our trees are grown on loose sandy land, which permits the root systems to develop properly, and we give them every care and plenty of fertilizer, which makes strong, vigorous tops. In other words we guarantee them to be strictly first class and true to name.

We have not attempted to grow all the known varieties, many of which are of but inferior quality. In our list will be found the most prominent and profitable kinds, such as can always be safely planted in either large commercial orchards or for home use.

We can furnish trees on Sour Orange root only.

Native Sour Orange as a Stock

If the list of stocks or roots on which to bud citrus fruits was reduced to one, the Sour Orange would come nearer meeting the requirements under all classes of soil and cultural conditions than any other stock used, it being the nearest a universal stock. There is a marked difference in favor of the Sour Orange root, in the quality of the fruit on a grove in full bearing. And, as the quality of the fruit must necessarily have an influence on the revenue from the grove, the Sour Orange has a decided advantage in this respect. Trees budded on the Sour Orange root are strong, vigorous growers, resistant to disease and immune from attacks of Maldigoma (foot-rot). The trees remain dormant for a longer period during the winter and the fruit will keep later on the tree than where the lemon or grapefruit root is used.

Standard Varieties

We believe that it would be better for the future of the orange industry if the plantings could be

more standardized and only one variety planted for its season of maturity. This would give uniformity to the character of Florida oranges on the market. California has made its fruit famous with only two varieties, Navel for midseason and Valencia for late. The sooner Florida growers commence to plant fewer varieties the sooner will the character of Florida fruit become standardized.

NORRIS EARLY SEEDLESS

Season: September and October

Fruit nominally seedless, velvety smooth skin, handsome appearance, medium size, quality and flavor the best. Largely planted in this county, where it originated about forty years ago. Experienced and successful growers prefer it to Parson Brown on account of its early coloring and smooth skin.

ENTERPRISE SEEDLESS

Season: October, November, December

One of the favorite mid-season oranges, considered by the old time growers the best for its season. Fruit medium to large size, nearly seedless, flavor rich, quality fine. Good shape and well colored when ripe. Named after Enterprise, Florida.

PINEAPPLE ORANGE

Season: January and February

One of the very best mid-season oranges, usually a dozen seeds or more, size medium to large, color deep orange with reddish tinge; originated near Citra, Florida. Largely planted over the state, bringing good prices for years on account of decided color and fine flavor.

VALENCIA LATE ORANGE

Season: April to June

The standard late orange, fruit of good size and fine quality, rich and juicy. Favorite of all planters for its season.

LUE GIM GONG

Season: Late Spring and Early Fall

This fruit is full of juice, and hangs on trees well, thus allowing the grower to take full advantage of market conditions.

Fruit of good size, and has been known to hang on trees for one or two seasons without material droppage, and on this account being planted by those desiring fruit of this class.

M'CARTY GRAPEFRUIT

Season: January to March

The famous Indian River strain of this excellent Pomelo; a good bearer of large fruits singly and well distributed on the tree. Usual number of seeds.

DUNCAN GRAPEFRUIT

Season: February and March

Large size, smooth skinned, old fashioned grapefruit flavor, color light yellow, juicy and a heavy bearer.

MARSH SEEDLESS GRAPEFRUIT

Season: February and March

One of the most desirable varieties on account of having few seeds; large size, heavy and juicy. One of the best.

VILLA FRANCE LEMON

Commercial Variety

Medium size, rind smooth and thin. Juice abundant, and of fine quality. Nearly seedless, good shipper and very fine market fruit. Undoubtedly the best variety for Florida planters.

PONDEROSA LEMON

Largest of the lemons, fruits weighing from one to two pounds, bears young and produces good crops. Valuable for home use.

Mandarin Varieties

DANCY TANGERINE

Season: December and January

The famous Kid Glove orange, loose peeled, aromatic, and a rich red color, always sells well. A very prolific variety commonly known as Tangerine. The best of its kind, and the only commercial variety.

KING TANGERINE

Season: March and April

This is the celebrated King, the only late strain of good quality. Juicy, well colored, large size, agreeable flavor and a heavy bearer; extensively planted, and a favorite for its season.

NAGAMI KUMQUAT

Season: October to January

Smallest of Citrus Fruits in cultivation, the plant being dwarf, usually growing to a height of about ten feet, and spread about the same. Fruit olive shaped, small, aromatic and spicy; used largely for table decorations, marmalade, etc. A decided novelty and usually profitable.

BUD SELECTION

All authorities are agreed on the value of careful selection of budwood used for propagation purposes, and while we might be termed radical on this point, we find the results of thirty years of rigid care, and the extra expense incurred in such selection is more than justified by results.

TREE SELECTION

In order that the fruits of our efforts in bud selection be not lost, we have gone a step farther and have originated an elaborate and systematic method of tree selection, thus insuring the productiveness and quality of fruits borne by our trees.

Necessarily with such care involved, production is limited; and while most nurseries are reluctant to sacrifice quantity to quality, we find that quality pays large dividends on the slight extra outlay. To those who desire results, and are satisfied with only the best, we commend our Tested Trees.

PRICES.

GLENWOOD CITRUS STOCK

	Each.	Ten.	Hun.
2 to 3 ft. -----	\$.60	\$ 5.50	\$ 50.00
3 to 4 ft. Cal. $\frac{1}{2}$ to $\frac{5}{8}$ inch	.80	7.00	65.00
4 to 5 ft. Cal. $\frac{5}{8}$ to $\frac{3}{4}$ inch	1.00	9.00	85.00
5 to 7 ft. Cal. $\frac{3}{4}$ to 1 inch	1.25	12.00	110.00

Tangerines being of slender growth, Caliper slightly smaller than above sizes.

OPPORTUNITY

“Master of human destinies am I!

Fame, love and fortune on my footsteps
wait.

Cities and fields I walk. I penetrate
Deserts and seas remote, and passing by
Hovel and mart and palace, soon or late,
I knock, unbidden, once at every gate.

If sleeping, wake; if feasting, rise before
I turn away. It is the hour of fate.

And they who follow me reach every state.
Mortals desire, and conquer every foe

Save death; but those who doubt or hesitate
Condemned to failure, penury, and woe,
Seek me in vain and uselessly implore.

I answer not, and I return no more.”
